HealthCare & Pharma

Product Authentication

License & Certificate

Security Payment

**SELF-DESTRUCTIVE TAG** is typically used in high level of security and authenticity applications such as traceability, brand protection, security document, certificate license where the product or asset being tracked are critical. These tags are designed to be highly resistant to tampering, and can help to prevent unauthorized access, theft, counterfeiting and those fake issues.

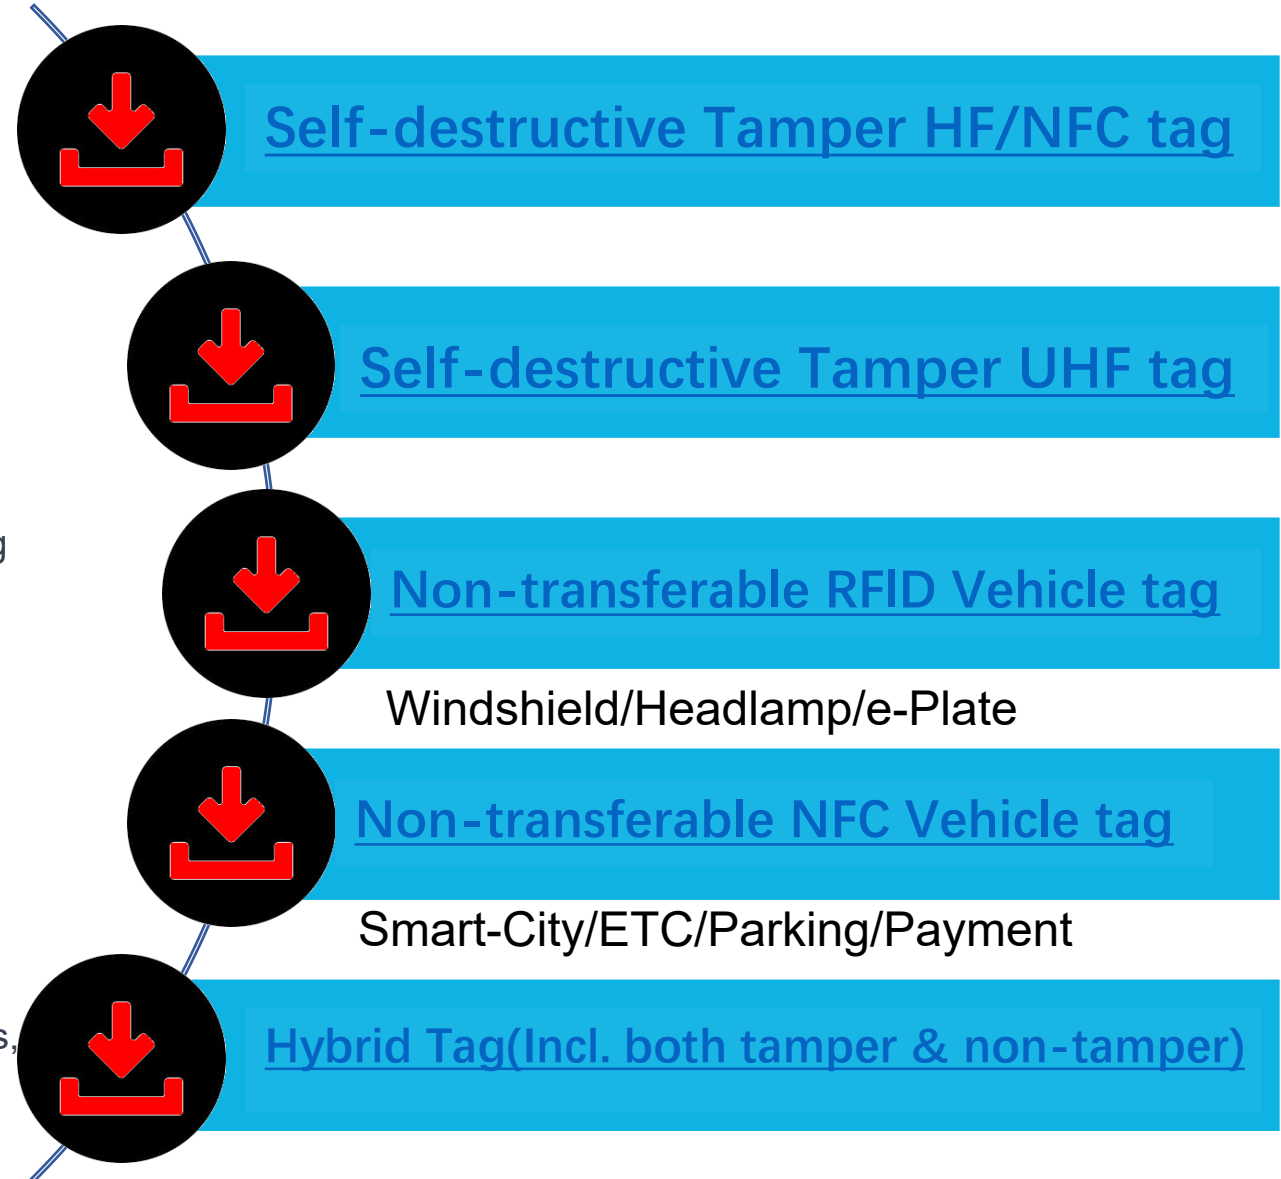

**Pharmaceuticals:** track and authenticate pharmaceutical products, ensuring that they have not been tampered with or counterfeited.

**High-value goods:** track high-value assets, such as artwork, jewelry, and luxury goods, providing an additional layer of security and ensuring that they are not stolen or counterfeited.

**Aerospace and defense:** track critical components and equipment used in the aerospace and defense industries, ensuring that they have not been tampered with or compromised.

**Food and beverage:** track and authenticate food and beverage products, ensuring that they have not been tampered with or adulterated.

**Government and military:** track and authenticate sensitive documents, equipment, and supplies used by government and military organizations.

Highly used for Automated Industrial Identification & Tracking, especially in plastic & metal parts such as Molding, Tooling, Gas Cylinder, automation spare parts, battery, engine, wheels and so on.

Involved in the transportation and tracking of goods, improved supply chain visibility, reduce the risk of theft and fraud, and ensure compliance with regulations

- ◆ Shipping and logistics - These companies are involved in the transportation and delivery of goods and are likely to improve tracking and security.
- ◆ Manufacturers and distributors - Track inventory or distribute goods as it moves through the supply chain and ensure that it is delivered to the right location.
- ◆ Retailers - Track shipments of products from manufacturers and distributors to their stores, and to ensure that the products are not tampered with or stolen during transit.
- ◆ Government - Responsible for regulating and overseeing the transportation of security document or goods, such as customs and border control to monitor shipments and ensure compliance with regulations.
- ◆ Healthcare and pharmaceutical companies - Track the movement of temperature-sensitive and high-value products, such as vaccines and medical devices, to ensure that they are handled and transported correctly.

Pick-to-light solution typically have specific needs related to order picking and fulfillment processes in a warehouse or distribution center environment. It helps improve order picking accuracy and efficiency by using light displays to guide workers to the correct items to pick, reduce errors and increase productivity in a warehouse or distribution center.

- **Faster order fulfillment:** fulfill orders quickly and accurately increase order picking speed and reduce errors.
- **Integration with existing systems:** integrate with their existing warehouse management or order fulfillment systems can use pick-to-light solutions that are compatible with their infrastructure.
- **Improved accuracy:** improve order picking accuracy by guiding workers to the correct items to pick and reducing the likelihood of errors.
- **Scalability:** easily expanded or modified to meet new business needs, such as document, parcels positioning in smart warehousing, key tracking & fast finding system
- **Flexibility:** Game, entertainment, e-commerce, pharmaceuticals, or automotive.

[Passive NFC LED Tag](#)

[Passive/Active RFID LED Tag](#)

[Active BLE LED Tag](#)

RFID & NFC sensor tag are widely used for health Care, medical pharma, electric power supply system, food chain, supply chain, fresh chain and cold chain monitoring & tracking system in order to track the movement of temperature-sensitive and high-value products, such as vaccines and medical devices, to ensure that they are handled and transported correctly.

- ➔ [UHF passive sensor tag](#)
- ➔ [NFC sensor Logger tag](#)
- ➔ [NFC & RFID Dual frequency sensor logger tag](#)

- 📄 [RFID & NFC Inlay](#)
  - Popular antenna design of inlays

- 📄 [Active Tag](#)
  - Including 433MHz, 2.45Ghz & BLE

- 📄 [Smart Card](#)
  - Including ID/NFC/RFID Key-fob member card for Access Control & payment

- 📄 [Wristband Tag](#)
  - Wearable Tag including LF/HF/UHF

- 📄 [Animal Tag\(Including LF/HF tube tag\)](#)

## RFID Tag Label

- Most for apparel/laundry use, retailing system, simple identification or Industrial Automation

## NFC tag Sticker

- For marketing, gaming, rapid linking & join to entertainment

## EAS Tag

- Super market anti-thief control

## Price Tag

- Super Market, retail store broadcasting & indicating purpose

## Multi-function labels
